Design and Usability Testing Report

Student Id : [unv\2050214]

Student Name : [Yogesh Shrestha]

Section : [L5CG8]

Lecturer : [Sachit Tandukar]

Module leader : [Sachit Man Sherchan]

Submitted on : <05-21-2021>

Acknowledgement

I'd like to express my sincere appreciation to everyone who helped me finish this report.

I'd like to thank our module leader "Mr Sachit Man Sherchan", lecturer "Mr Sachit Tandukar", and GTA Dinesh Shrestha for their suggestions and encouragement in helping me organize my project, particularly in writing this report. The guidance of Mr. Sachit Tandukar was incredibly useful in bringing together a correct report format. I am particularly grateful to GTA "Dinesh Shrestha", for his support. The assistance of lecturer "Mr Sachit Tandkukar was highly appreciated. Thanks to all of my friends and community members who helped me put the pieces together and finish this report, both directly and indirectly.

1. Introduction

User Interface (UI) Design is concerned with understanding what users will need to do and knowing that the interface contains components that are simple to view, recognize, and use in order to enable such activities. Interaction design, graphic design, and information architecture are all combined in UI. The interface is needed to be simple and easy to use so that, user become friendly with the elements of interface and they can predict the possible outcomes from what they doing. Making interface user friendly it makes users to perform task effortlessly, satisfying and entertaining way. (usability.gov, n.d.) The boosted website is included with interface elements like:

- Input Control: buttons, text fields, dropdown lists, toggles etc.
- Navigation Components: breadcrumb, search field, tags, icons.
- Informational Components: icons, loading animation, message boxes, modal windows.
- Containers: accordion

It is inappropriate way to show multiple navigation elements at navigation bar. But, hen we use dropdown effect on certain element of nav bar then, give sign (down arrow) it make users curious to check what's inside that element.

This is website of character. Users are met with an explosive, fun-filled, images of the product in action as soon as they arrive. there is encapsulate with information of products. Then, there is the "I need Boosted Scooter" and "I need Boosted Boards" call-to-action in the middle of the phone, eagerly waiting for user to choose.

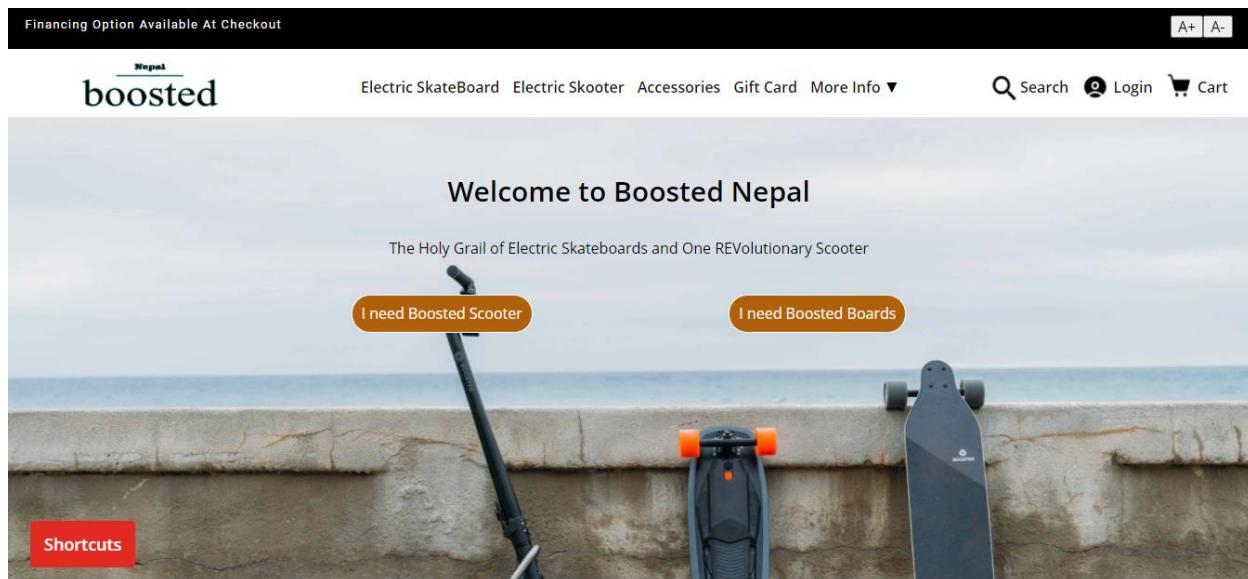

Figure 1 introduction home page

After click a button that user choose, it shows every product related to field. Clicking on “Buy Now” gets user to business. Need for information? Clicking on “learn more” will deliver to information page of the products. Trying to subscribe or login? There are the explanation right side of the input filed which will give idea to user what to input. When subscription or login is successfully is done, it let user know with message box. Lost the location where you at? There are breadcrumbs that let you know the location that you are.

2. Design Process

By getting to know the users, which includes learning about their interests, abilities, habits, and actions. Once, I know about users, I designed my interface with following considerations:

- 1) Keeping the design simple

The finest user interfaces are almost imperceptible. They stay away from needless features and use simple words on labeling and in messaging.

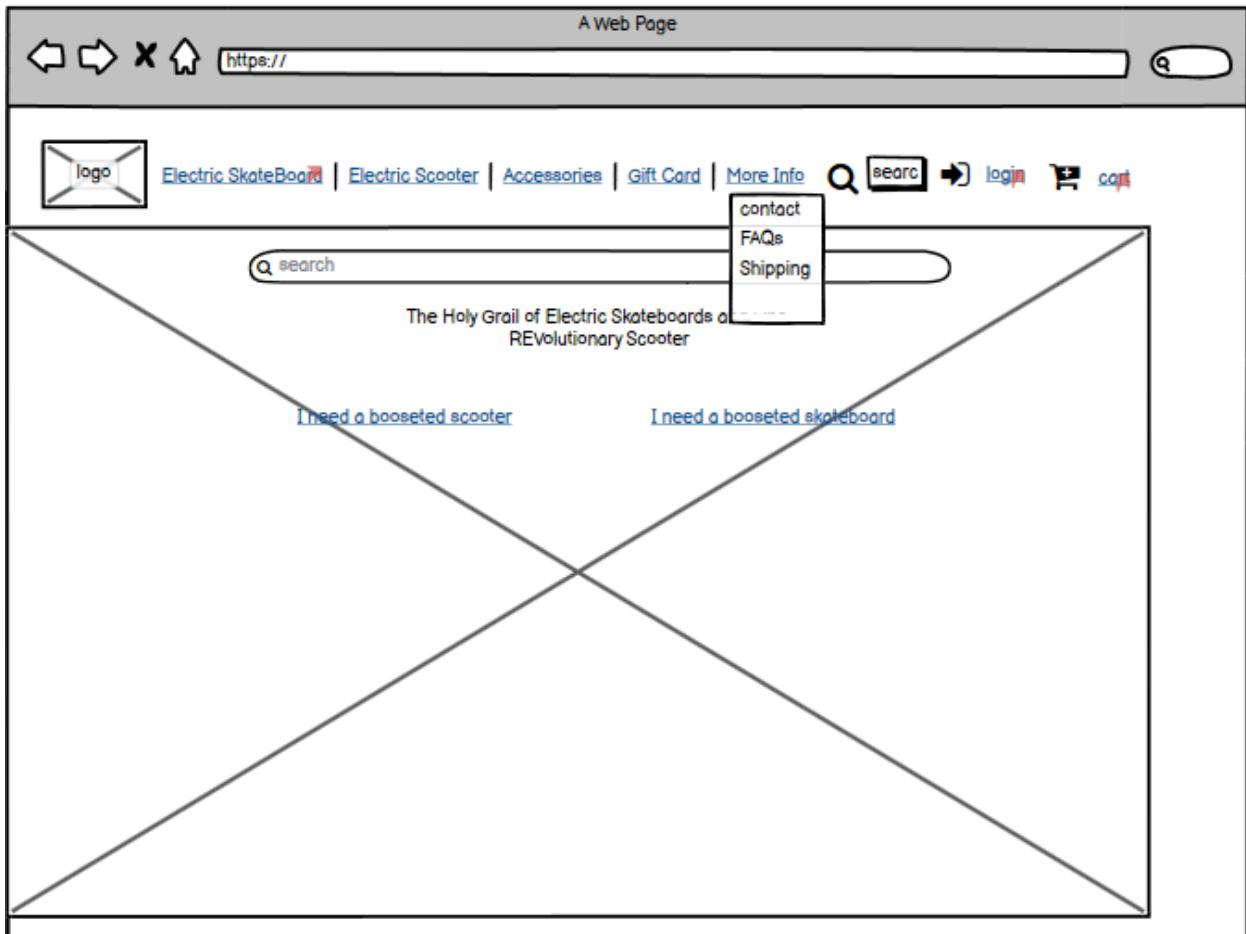

Figure 2 Wireframe of home page

In this figure, it shows home page of the boosted Nepal website. It has implemented with necessary labels and elements to show users.

Figure 3 Design of home page

In this figure, it has implemented the wireframe into the design. But there is added extra section for accessibility of website at top.

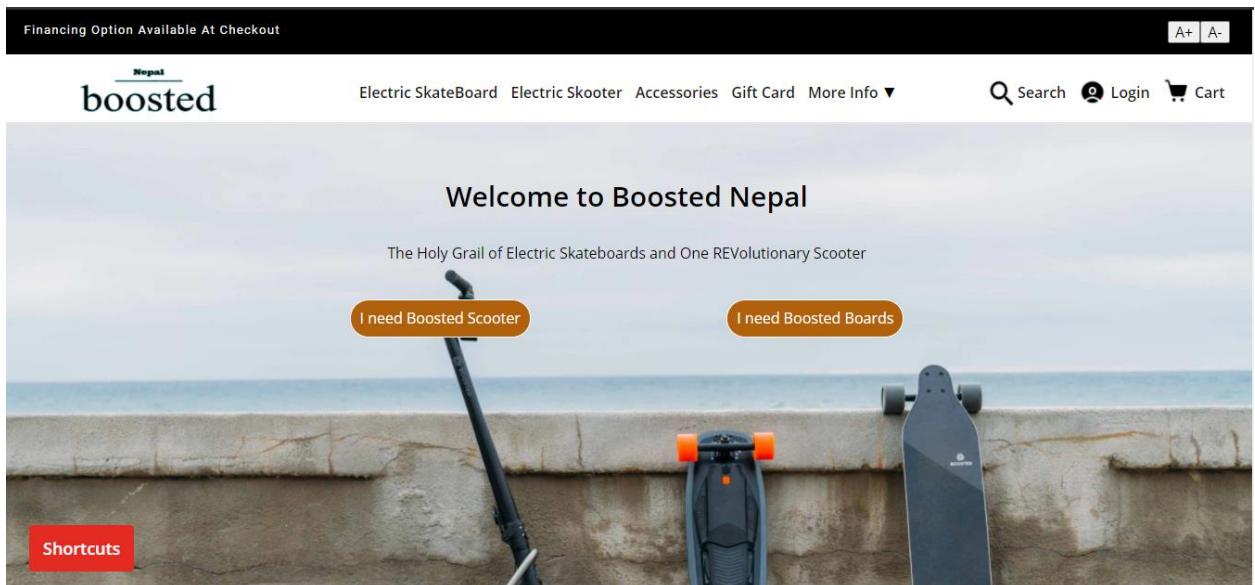

Figure 4 Developed home page

In this figure, design is successfully implemented into development but there is difference in adding accessibility at top.

To keep website simple interfaced, I created wireframe with necessary label, navigation elements and those which are not necessary I added to dropdown list. By adding short labels, and elements, it makes users to save time and not get bored. First, I created wireframe, created designed according to wireframe then, applied interface in development process.

2) Using common UI elements to create consistency.

To make user feel comfortable and get to use with the website, this interface needed to use common elements like buttons, breadcrumbs etc. it is necessary to establish patterns in language, style, and design with the web. Once a user understands to interface it makes easy to understand interface in other webpages.

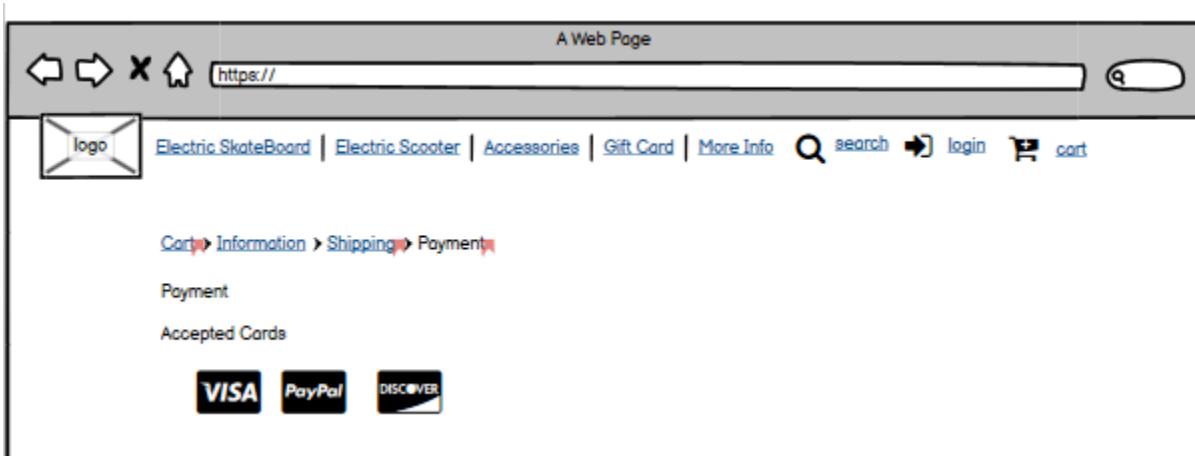

Figure 5 Wireframe of breadcrumbs

In this figure, breadcrumbs wireframe is created.

Figure 6 Design of breadcrumbs

In this figure, inaccurate breadcrumbs designed is created.

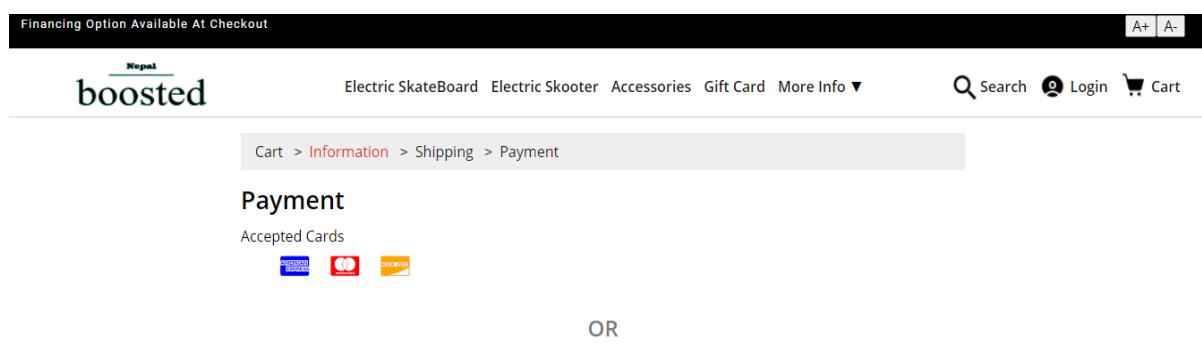

Figure 7 Developed breadcrumbs

In this figure, breadcrumbs is developed in website.

I have used same color for button so that user recognized the button color quickly. And also created breadcrumbs to let user the location and further steps to go in the process of performing task. First wireframe is created of breadcrumbs and designed it then, used it to develop the website.

- 3) When it comes to page layout, being deliberate.

By giving proper priority with product items and arranging it. It makes easy to get attentions and make curiosity to the users.

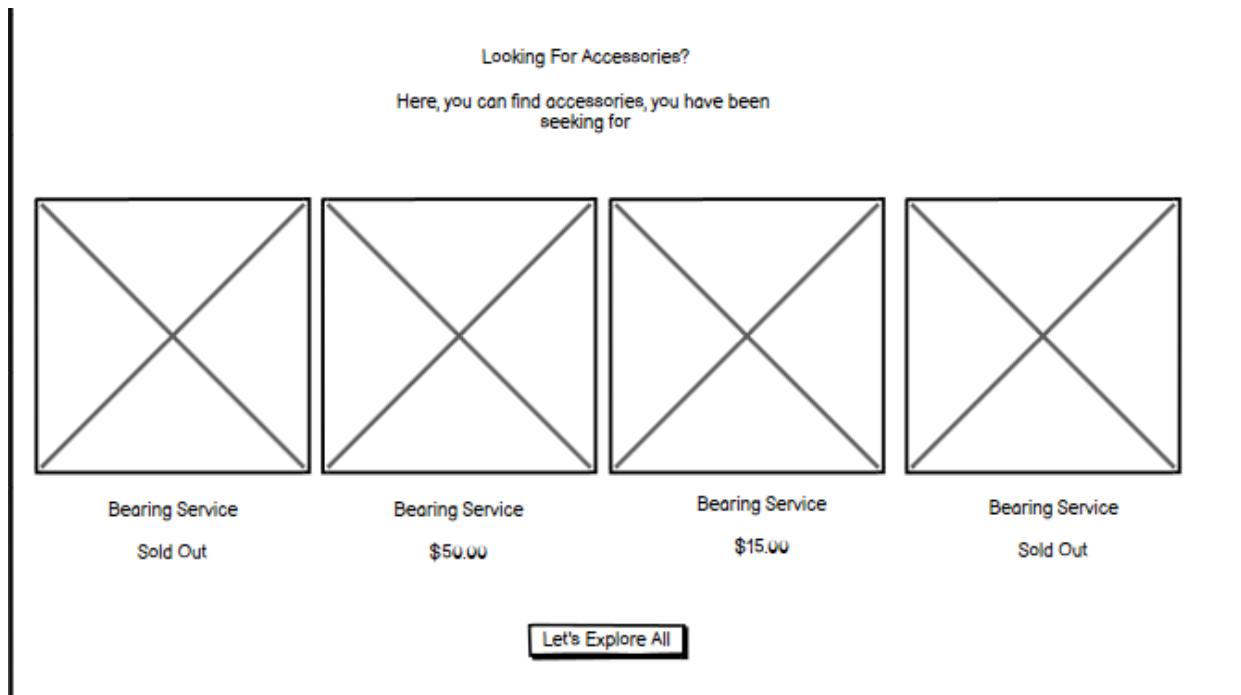

Figure 8 Wireframe of accessories

In this figure, looking for accessories wireframe section is created which shows products details.

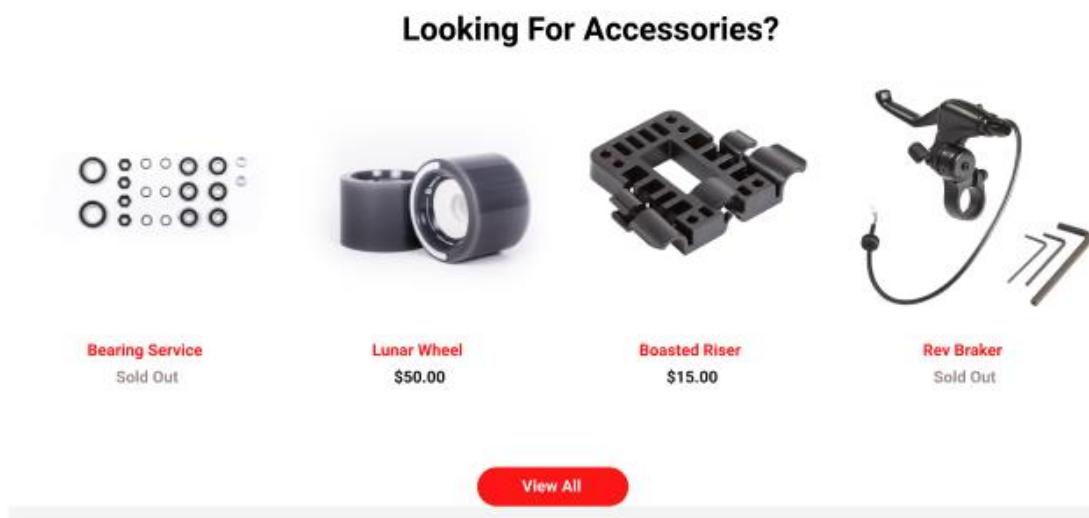

Figure 9 Design accessories

In this figure, design is created.

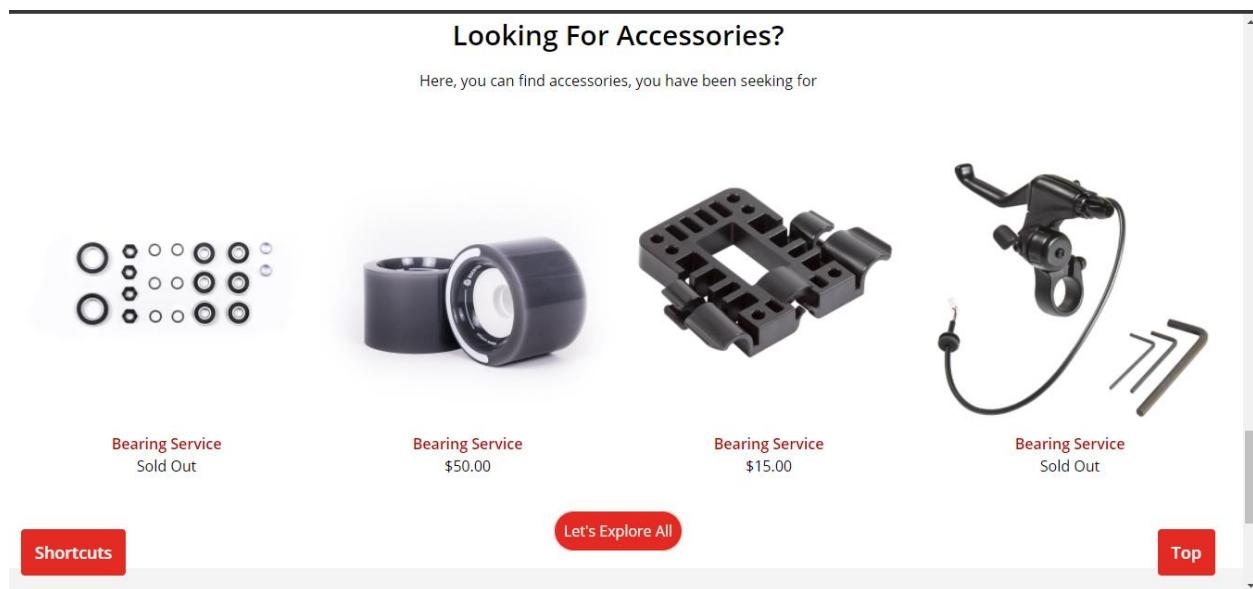

Figure 10 Developed accessories

In this figure, looking for accessories section is developed in website as like design. Home page is the main page of the website. For ecommerce website, it should get attention of the users. By arranging items on the page and organizing the information on the website according to its relevance, it makes user to do task instantly without bothering to read.

4) Making use of color and texture in a strategic way.

By using same color, light, contract and texture according to elements, it may draw attention to something or draw it away from something and makes easy to understand of color used for according to elements.

I make color button same to make user clear that, buttons have specific color. With the proper contraction texture and color, it also helps disabilities users to read. And by highlighting with different color in certain important text, make user to focus.

5) Checking to see how the machine is communicating what's going on.

By Letting user know what they are doing, where they are, and helping to perform task makes user for easy use of website. Using different UI elements to convey condition and, if needed, next action will help the user feel less frustrated.

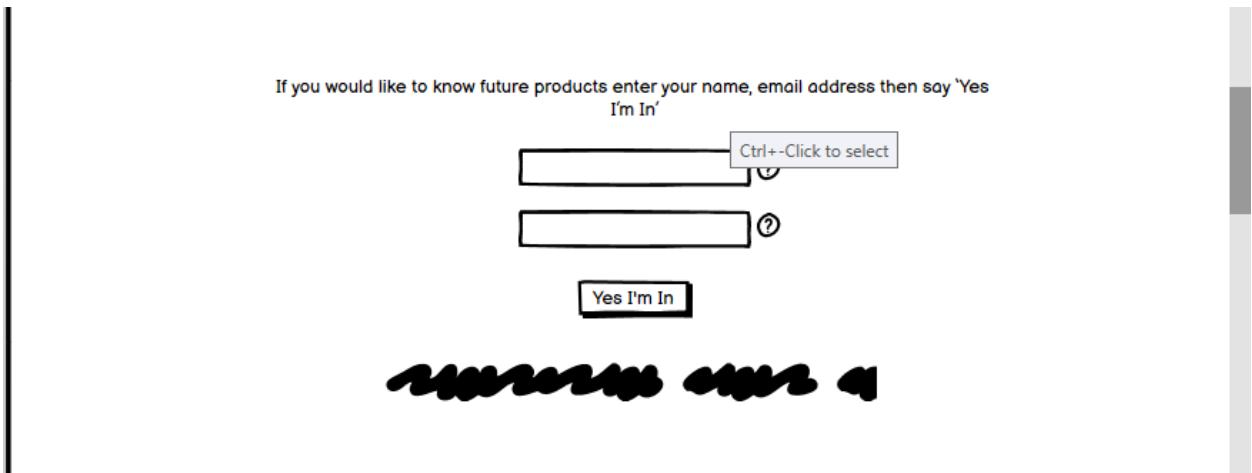

Figure 11 wireframe of footer section

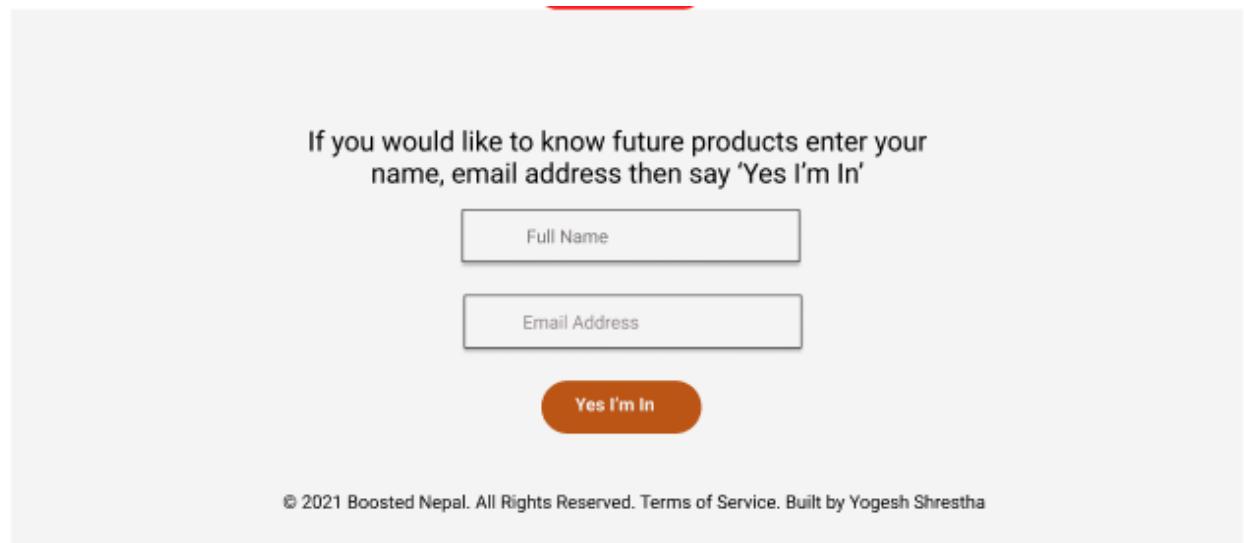

Figure 12 Design of footer section

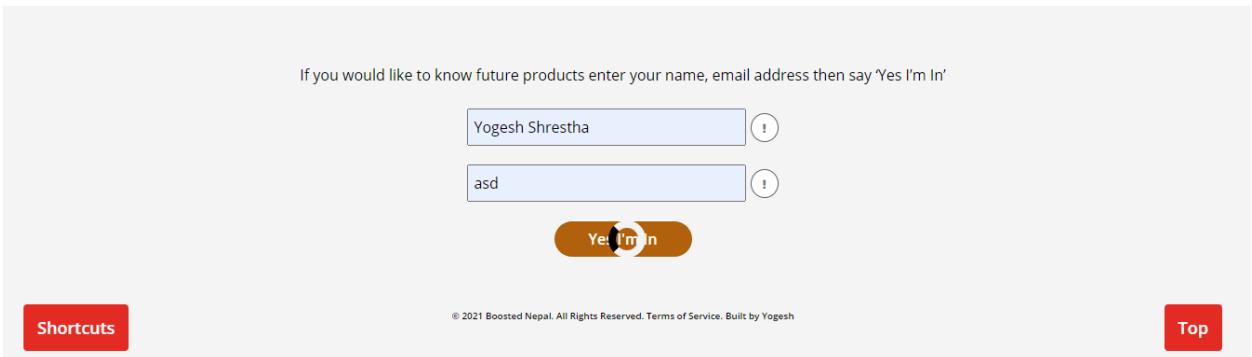

Figure 13 Loading animation

I have added animation loading, message box to let user know the task he/she is performing is still running. It helps to give idea to user about what is happening.

6) Making website support for disabilities.

By making website with accessibility features makes disable users to use and understand.

By labeling image description makes disabled user easy to get information of image, and let know locations. With the help of font size increase accessibility, it makes easy for those users who have problem with reading small size text.

I have added accessibilities features of font size increment and decrement. It makes users to read given text of website by increasing font size.

3. Evaluation and Testing

The main purpose of this evaluation is to provide guidance on experience gained in order to enhance future assist strategy, programs, and project work.

The objective of this testing was to check the usability working on website or not. The participant of usability testing was conducted by self-developer and friends who have basic knowledge of web.

The equipment used for conducting this test are UX check google extension. This extension allows to check usability of website.

3.1. Usability Check Results

3.1.1. Heuristic: Visibility of system status

Severity: 3

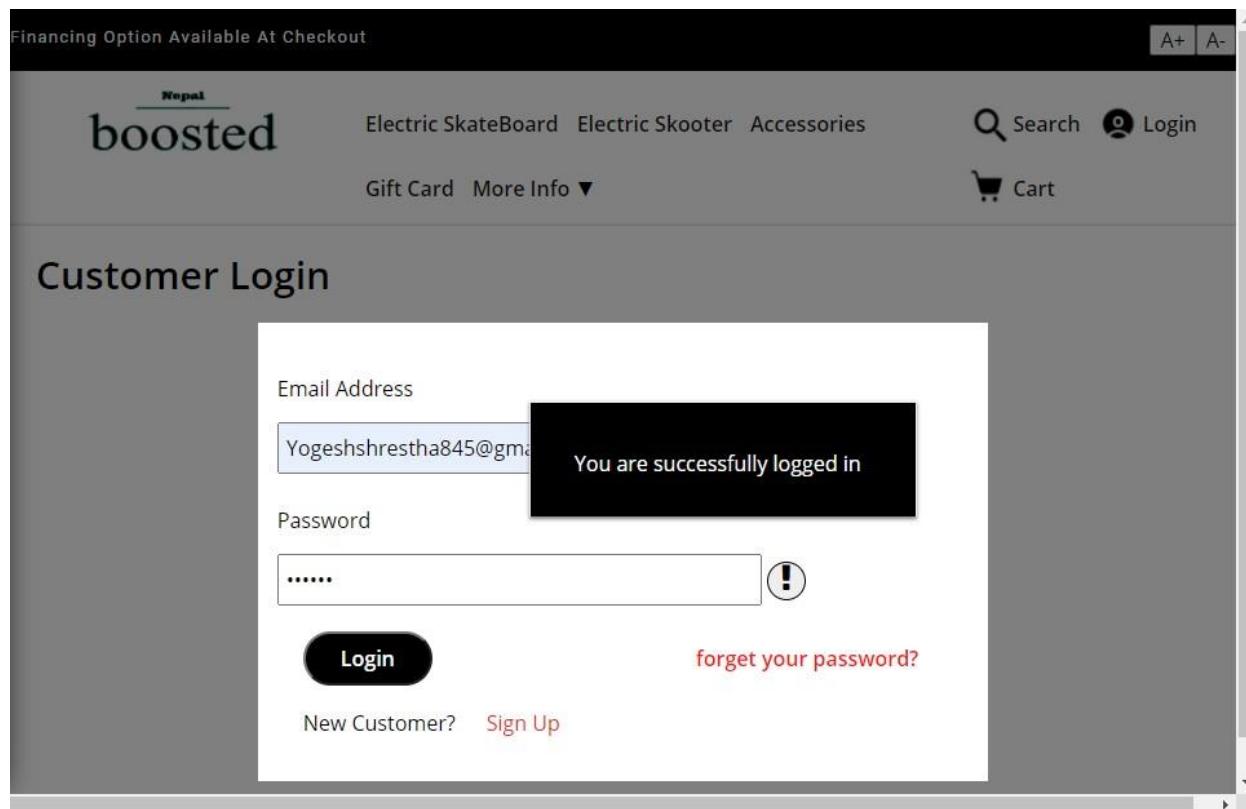

Figure 14 Visibility of Log In message

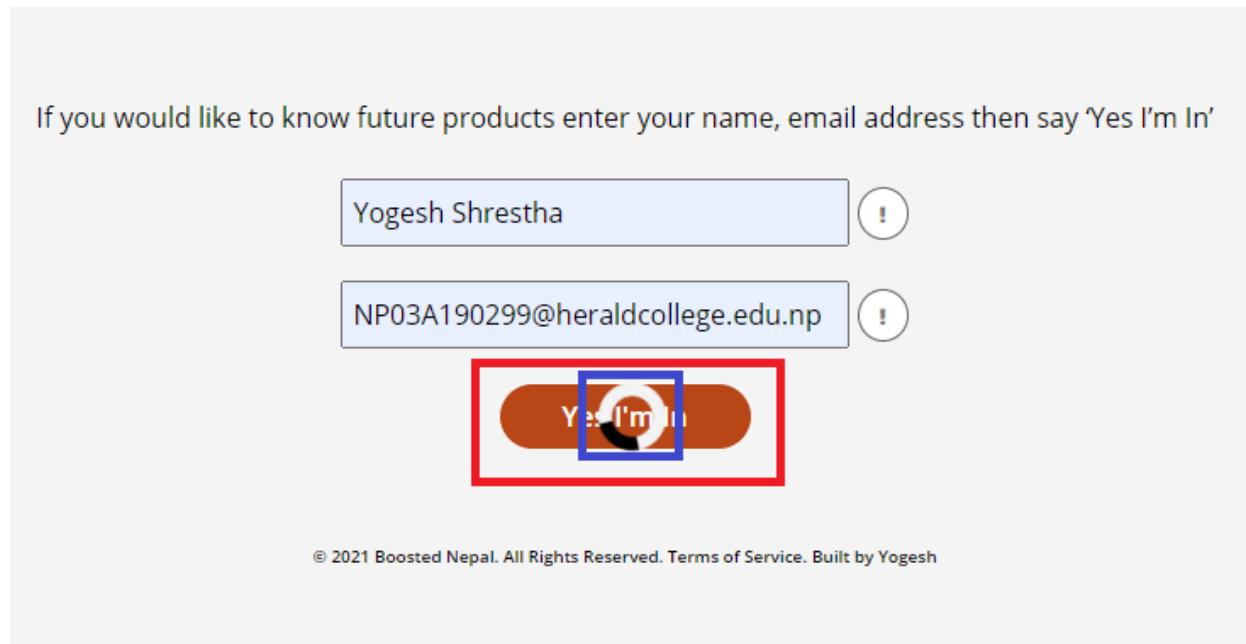

Figure 15Visibility of loading animation Figure

Notes: login message box

Recommendation: should have used proper css.

3.1.2. Heuristic: Match between system and the real world

Severity: 3

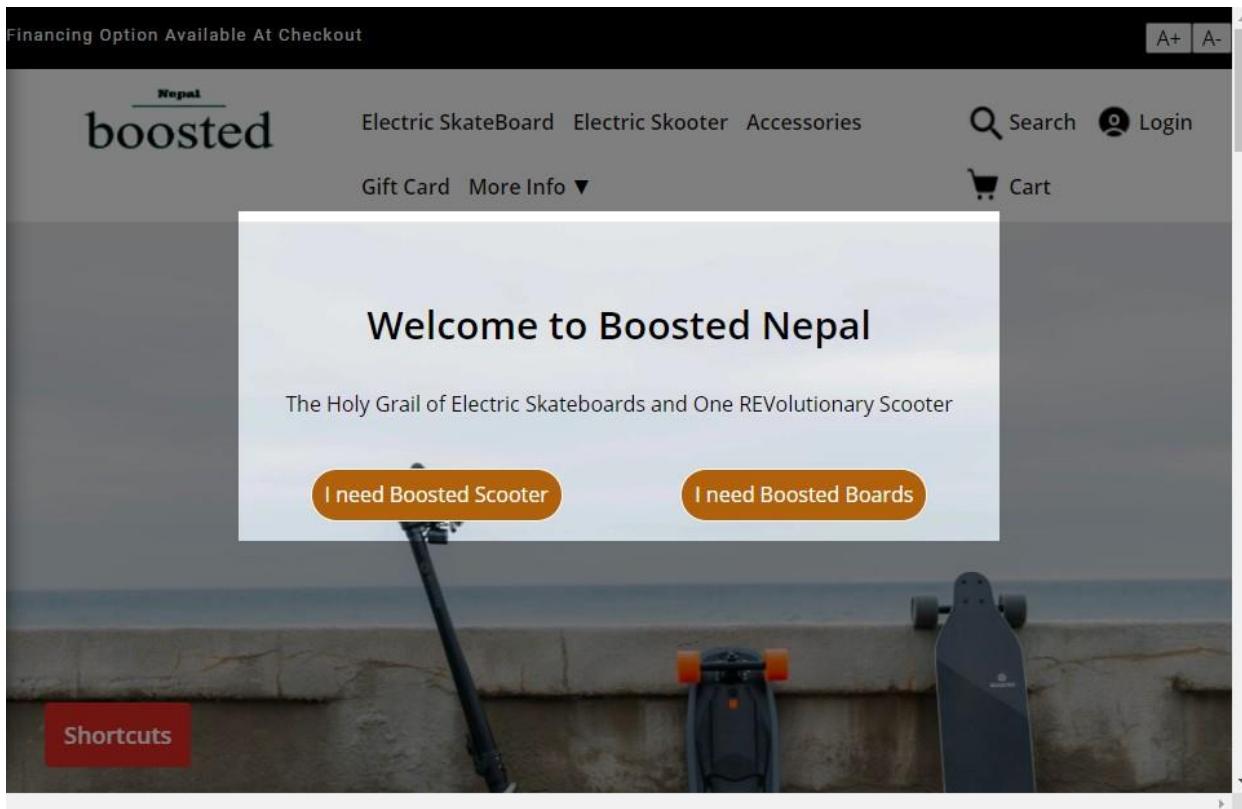

Figure 16 User language

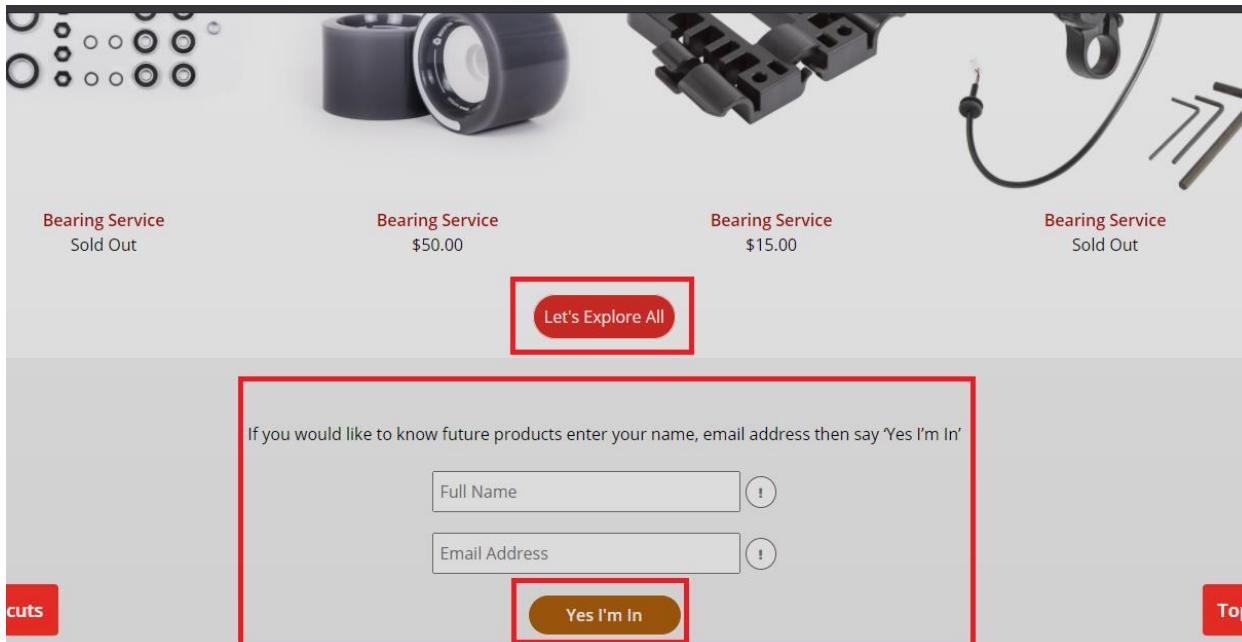

Figure 17 User language II

Notes: User language at button

3.1.3. Heuristic: User control and freedom

Severity: 2

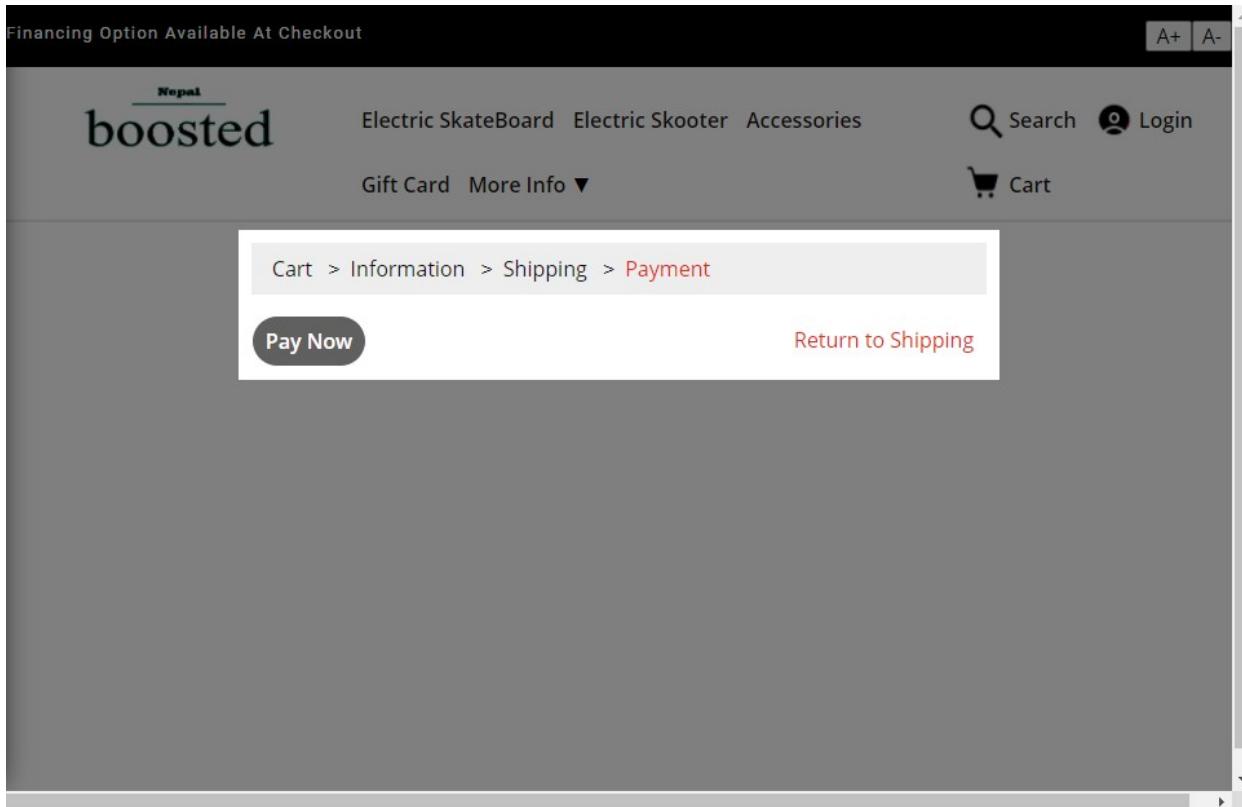

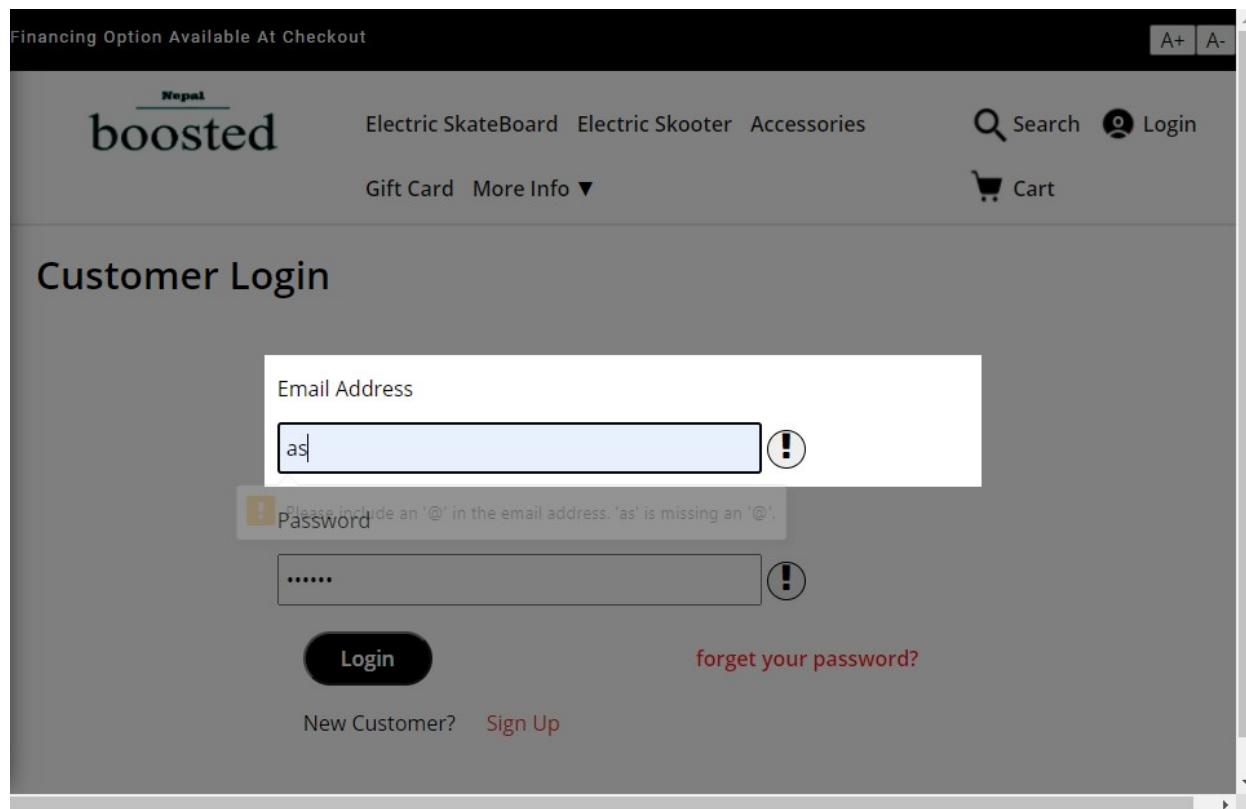

Figure 18 User control

Notes: pay now or return home

Recommendation: should have given more freedom like cancel or keeping it.

3.1.4. Heuristic: Error prevention

Severity: 3

The screenshot shows a login form on a website. At the top, there's a banner with the text "Financing Option Available At Checkout" and a font size selector "A+ A-". The header includes the "boosted Nepal" logo, navigation links for "Electric SkateBoard", "Electric Skooter", "Accessories", "Gift Card", and "More Info ▾", a search bar, a login link, and a shopping cart icon.

The main area is titled "Customer Login". It has two input fields: "Email Address" containing "as" and "Password" containing ".....". Both fields have an exclamation mark icon in a circle to their right, indicating an error. Below the password field is a tooltip: "Please include an '@' in the email address, 'as' is missing an '@'." At the bottom left is a "Login" button, and at the bottom right are links for "forget your password?", "New Customer?", and "Sign Up".

Figure 19 Error prevention

3.1.5. Heuristic: Recognition rather than recall

Severity: 4

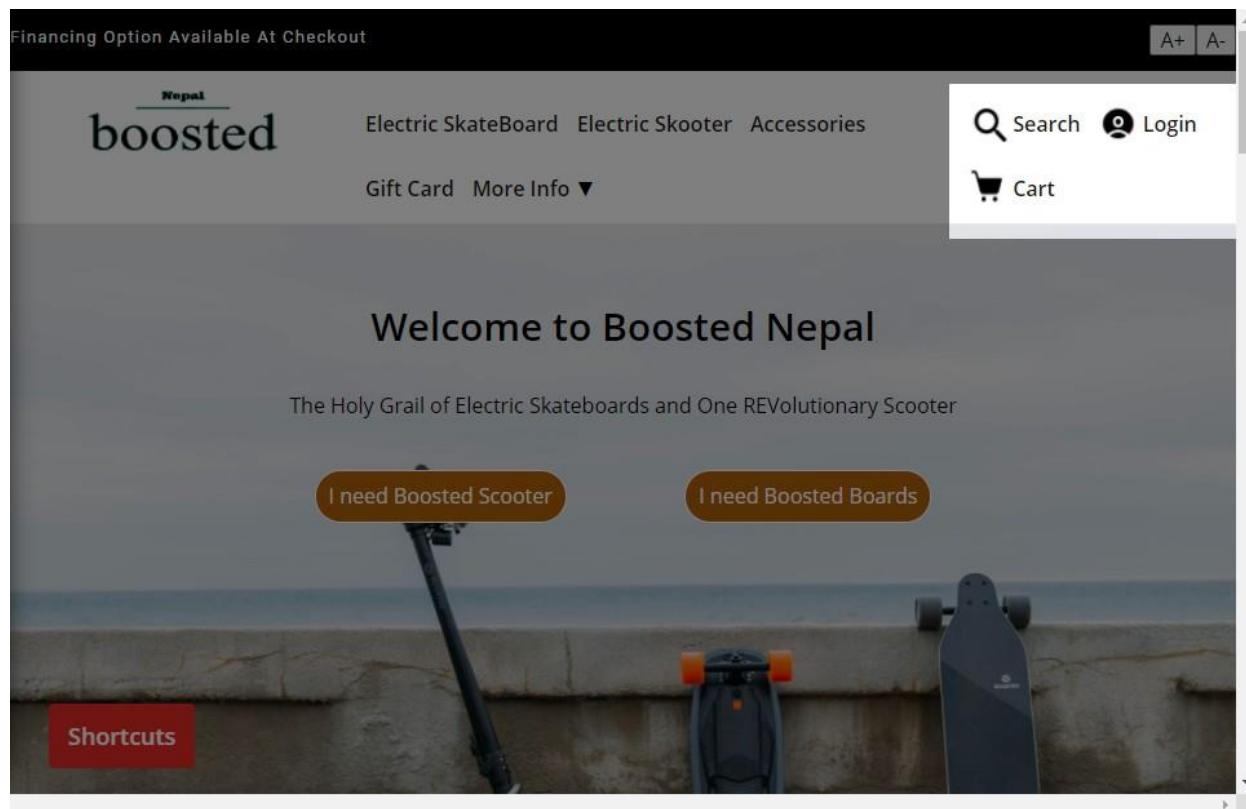

Figure 20 Recognition

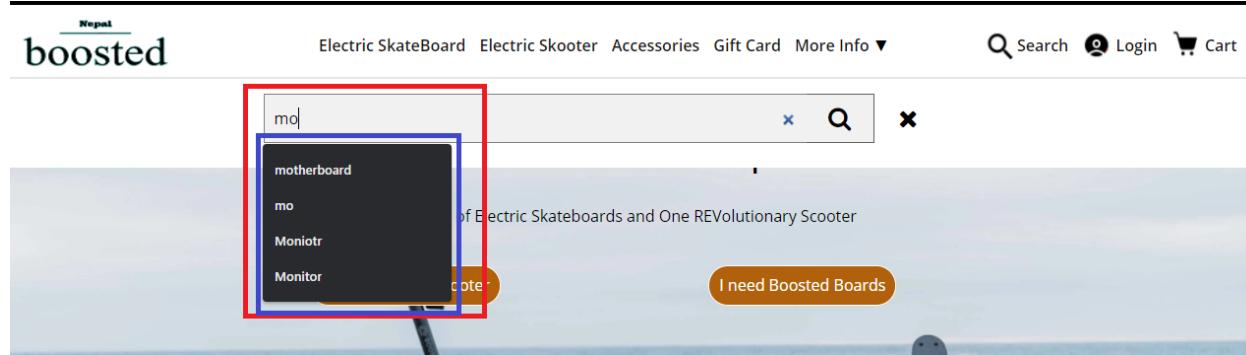

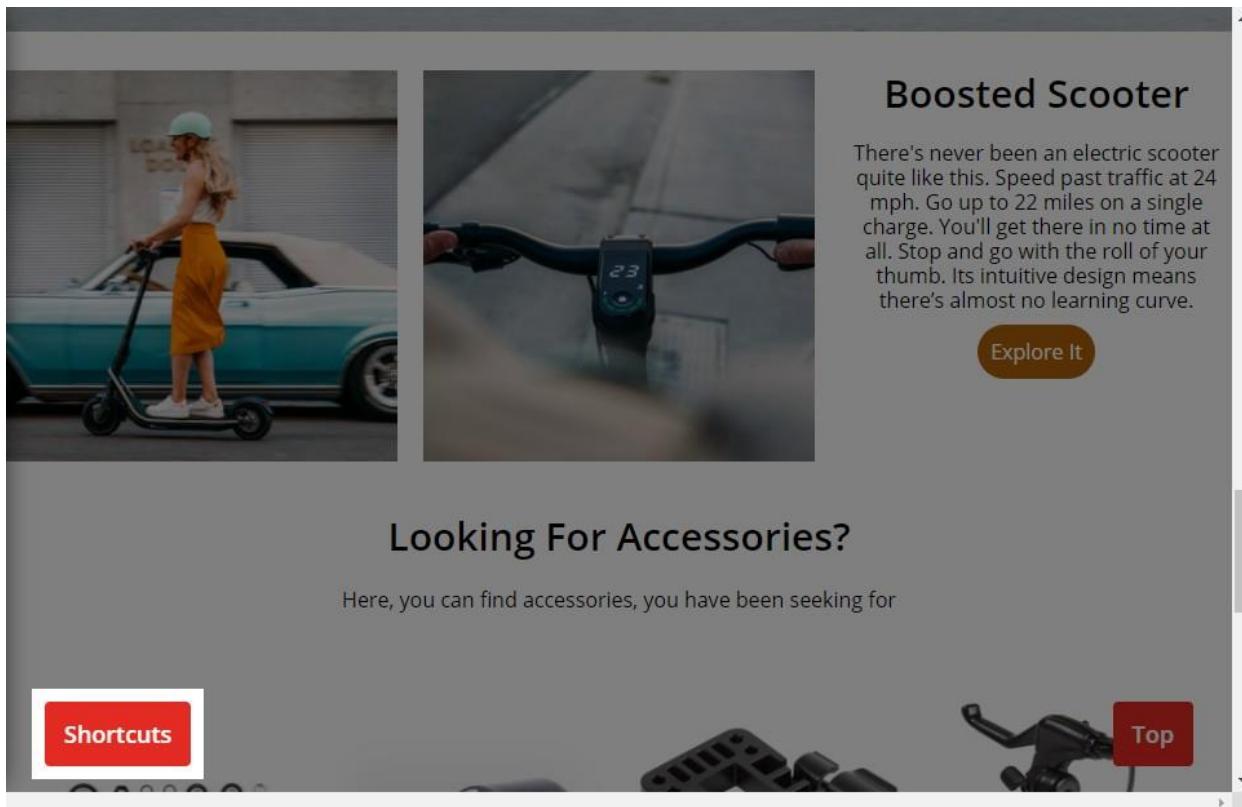

Figure 21 Recognition rather than recall

Notes: icons and description

3.1.6. Heuristic: Flexibility and efficiency of use

Severity: 3

Boosted Scooter

There's never been an electric scooter quite like this. Speed past traffic at 24 mph. Go up to 22 miles on a single charge. You'll get there in no time at all. Stop and go with the roll of your thumb. Its intuitive design means there's almost no learning curve.

Error prevention	Login help at input field	4	applied
Recognition rather than recall	Icon with description, and at search input field	4	applied
Flexibility and efficiency of use	Shortcut keys and scroll instantly at top	3	applied
Aesthetic and minimalist design	2 option buttons learn more or buy now	3	applied
Help recognize & recover from errors	Input field blank message pop out at footer.	4	applied
Help and documentation	FAQs page and login side help	4	applied

Severity Ranking	Estimated Occurrence Frequency
4	Will occur > 90% of the time
3	Will occur 51 – 89% of the time
2	Will occur 11 – 50% of the time
1	Will occur <10% of the time

Evaluation of website by friends

This website is also evaluated by friends. I hosted the website and created google form. Then, share the website and form link to check the website and give feedback.

I asked question at form and let friends to choose answer, give answer and rate the website.

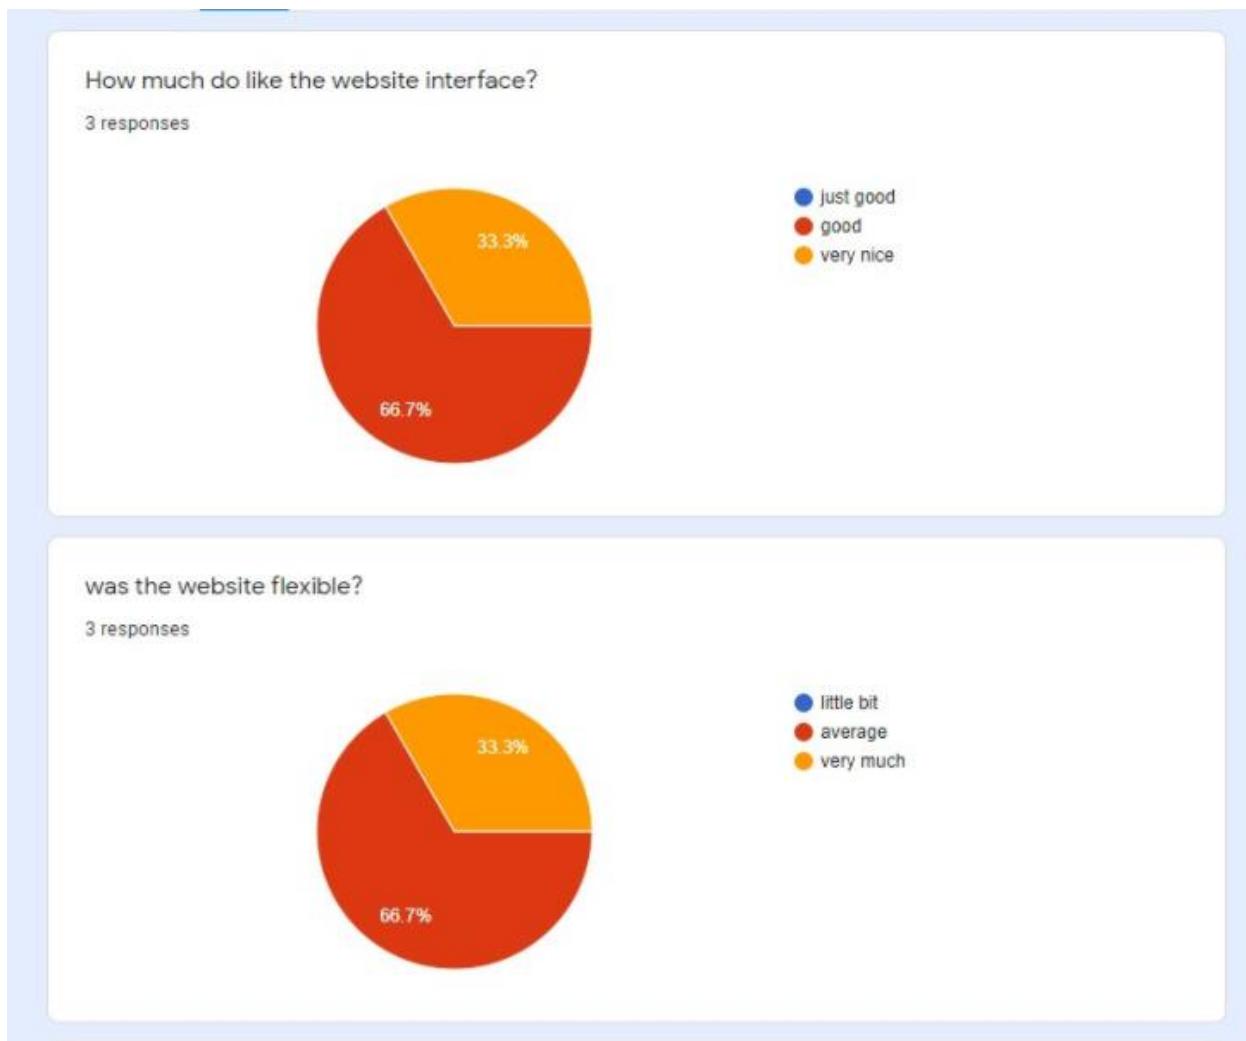

Figure 28 Evaluation Chart I

In this figure, it shows the structure of answer that is given by friends. It shows 66.7% finds good and 33.35 find very good on website of the question.

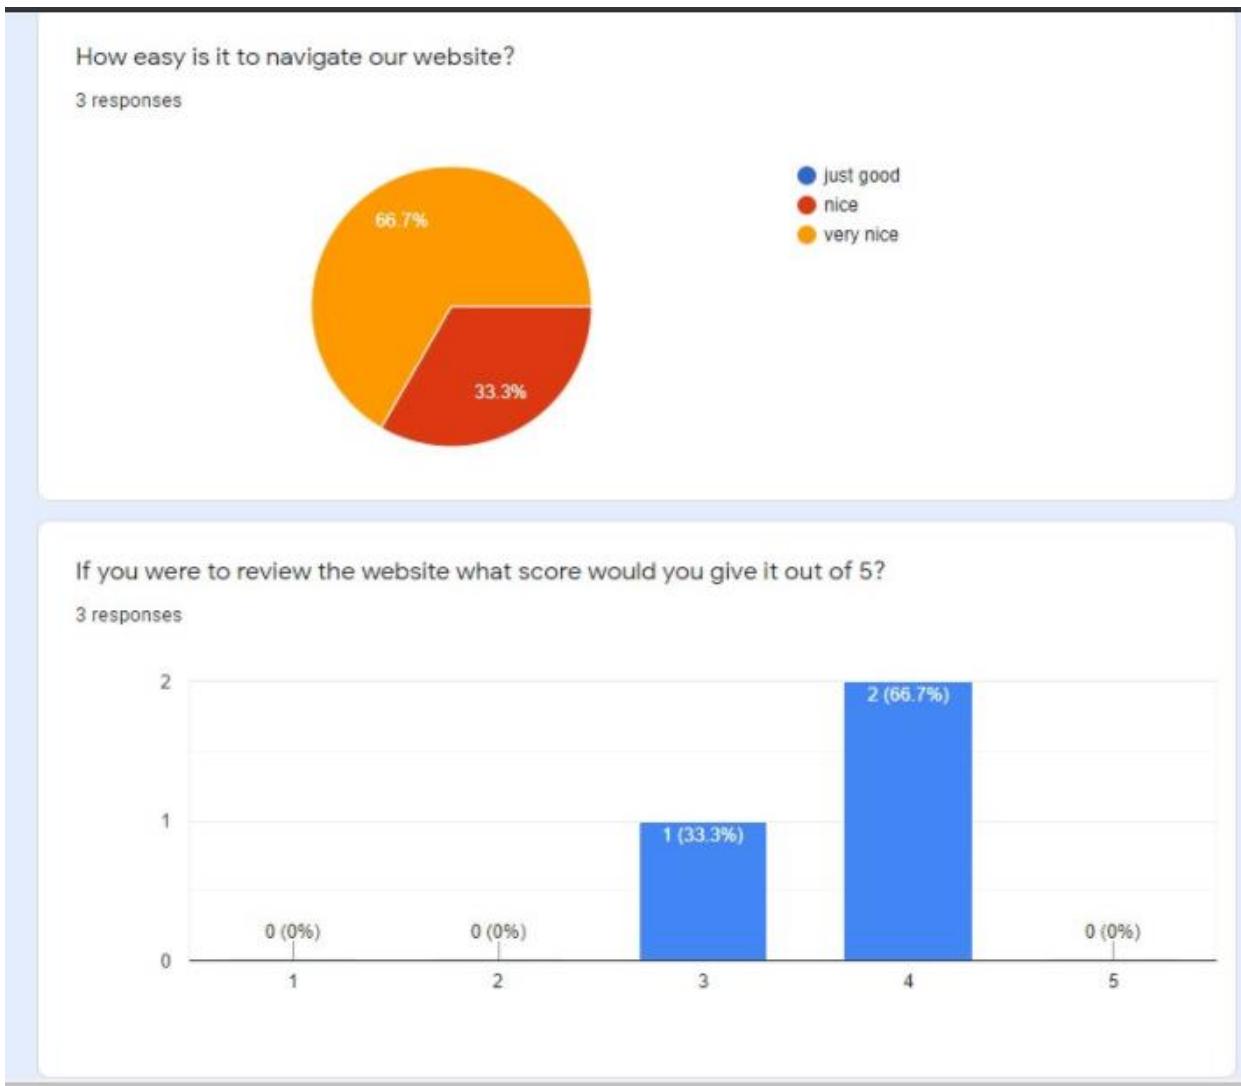

Figure 29 Evaluation chart II

In this figure, It show the answer of easiness to use navigation on the website. And it also shows the rate of website that is given by website.

What did you like best about our website?

3 responses

All things

Over all its good.

Design

Do you have any Feedbacks, questions, or concerns?

3 responses

No

All things

Over all its good.

Design

In this figure, it shows the answer people liked it and feedback they gave to me.

Figure 30 Feedback

4. Conclusion

Nowadays, Web application is growing rapidly with better interface. The interface is getting more user friendly and easier to understand.

While creating this web application. Wireframe is created in as step 1. To create wireframe proper requirements, plans are needed to made. And after wireframe, design is created as step 2. To create design the wireframes idea requirement is added while developing web page design and also colors, different styles are added too. Then, web application is created as step 3. Every designed element is added while developing web page.

This website is user friendly, and simple and easy to use. It contained with 10 heuristic usability rules. Every rule is applied at web application. Then, web application's usability is evaluated with

severity by giving severity ranking according to usability applied and worked. The list of usability is shown in following tables. So on, friends who have basic knowledge of web also helped to rate the interface of the website.

Overview

The Pinnacle of performance

Stealth is the high-performance electric longboard you've been dreaming of, built from the ground up with attention to detail at every turn, including a new ride mode, exclusive to Stealth, with higher top speed and lightning-fast acceleration. The deck's construction has been re-imagined utilizing techniques developed in snowboard manufacturing to deliver a more refined ride feel, while retaining the flex, vibration absorption, and deep carving capabilities Boosted riders have come to love. With a focus on the rigors of daily commuting, we've upgraded the drivetrain with CNC precision machined trucks. Stealth comes stock with Boosted's new, custom-designed 85mm Stratus wheels. For the ultimate in electric skateboard technology and performance, look no further than Boosted Stealth.

Hill Climbing: Climb a 25% grade with speed and ease.

Ride Modes: 5 ride modes, including the all-new Hyper mode, exclusive to Boosted Stealth.

Wheels: Boosted Stratus 85mm wheels deliver the highest roll speed of any Boosted board to date. Deck: Super Flex composite deck offers the perfect mix of flex and feel for an extremely responsive ride.

Brakes: Regenerative and reliable. Come to a smooth stop at any speed.

Remote: Ergonomic and Bluetooth™ enabled. Control your speed with comfort and ease.

FAQs

Q: Are your products 100% manufactured by Boosted?

A: Yup, we acquired everything that Boosted had, and it came direct from them.

Q: What if something says out of stock?

A: We are absolutely not permitted to create new products for / by Boosted because their IP was sold off. We can only sell the rest of the stock that we have. Supplies are extremely limited, this is the last of Boosted's stock and when it's gone it's gone forever. Once something says sold out, that is it, you will not be able to get it again.

Q: Who pays for shipping?

USA answer: We will pay for shipping on anything over \$100. If you need something repaired you will be required to pay for shipping both ways. If your board requires a warranty part we will do our best to ship you a replacement part on us to get you back up and rolling.

Canadian answer: Please see [shipping page](#)

Q: Where are you located, can I come in for a visit?

A: We are located in San Francisco, CA and are not open to the public.

Q: I am a retailer and am desperate for more Boosted products. Can you hook me up?

A: Send us an email: support@boostedNepal.com

Q: I am international, specifically Canada. Can I buy from you?

A: We are now shipping to Canada! We are actively trying to go more international, please keep an eye on our Instagram @boosted_usa to stay up to date on announcements.

Q: I am going to use a freight forwarder. What happens if they can not forward the order because of a battery or other issue?

A: Regardless of us warning people, some people have tried to use a freight forwarder to order boards and scooters. If your board or scooter gets rejected and returned to us, we will refund you - \$200 / unit, to cover our shipping and rerouting fees. (Yes it costs us approximately \$200 when your order gets rejected)

Q: How about Alaska or Hawaii?

A: As much as we would like to ship to you, FedEx and UPS are very specific about our batteries traveling on airplanes so we can not ship to either of those states.

Q: What happens to me if I already own a Boosted Board with a warranty?

A: We are not Boosted Boards. Unfortunately Boosted went bankrupt and from what we've seen older warranty claims are being ignored.

Q: Then who are you guys?

A: We are the guys who bought all of the remaining inventory from Boosted after they shut their doors.

Q: What does that mean for me? Can I still get service for my Board / Rev?

A: We cannot honor warranties for items bought from Boosted because they are a different company. We can absolutely help you with service. If there is something that you need from us, belts, chargers, advice, please feel free to reach out to us: info@boostednepal.com and we will do the best we can to respond to you ASAP.

Q: So if I have a warranty/repair issue with a board/scooter I already own I'm totally screwed?

A: On the one hand, yes; when Boosted went bankrupt it appears that your claims to free replacements/repairs may have gone up in smoke. That being said, we understand the frustration you may feel and we want to do what we can to help. Email us at info@boostednepal.com and let us know what's going on and we'll do our best to sort you out as fairly as possible, just remember that we are a different company and had nothing to do with your original purchase so if we don't hand you a new board please don't yell at us.

Q: If I buy something from you, what sort of warranty do I have?

A: We have a limited 60 day warranty for everything you receive. This covers you for manufacturers defects out of the box. If you receive a product that you believe is defective please contact us immediately and do not use your product. Please include your serial number (if applicable) and a photo or video demonstrating the problem and email it to: info@boostednepal.com. If we decide your issue needs inspection or replacement we will provide you with an RA number that must be attached to any items shipped back to us.

Q: I need a replacement part that I don't see on your site.

A: That's not a question but you should know that we're continuing to receive boxes of goods and as we find items we will be adding them to our website for sale. Please keep an eye on the site in the coming weeks.

Q: Will you be receiving more 105 wheels and/or Beams?

A: We hope so but again, we're unboxing products as fast as we can. We expect to see more of these items and we will add them to the site as soon as we do. In the meantime make sure to add your email to the "notify me" box and you'll get an email as soon as more stock is added.

Q: I have an existing Boosted product with an issue. Can you help me repair it?

A: If you have a Rev, yes! To get advice on how to fix an issue with your Rev, for assistance figuring out what part you need, or to start a repair ticket, please contact our service department at info@boostednepal.com. Please attach any relevant videos or photos showing your issue so the specialists can best assist you. Unfortunately, we're not able to repair boards, however we are able to provide you with pointers and sell you spare parts that will get your board up and going. Please email us and we'll do our best to help you out.

Overview

The Pinnacle of performance

Stealth is the high-performance electric longboard you've been dreaming of, built from the ground up with attention to detail at every turn, including a new ride mode, exclusive to Stealth, with higher top speed and lightning-fast acceleration. The deck's construction has been re-imagined utilizing techniques developed in snowboard manufacturing to deliver a more refined ride feel, while retaining the flex, vibration absorption, and deep carving capabilities Boosted riders have come to love. With a focus on the rigors of daily commuting, we've upgraded the drivetrain with CNC precision machined trucks. Stealth comes stock with Boosted's new, custom-designed 85mm Stratus wheels. For the ultimate in electric skateboard technology and performance, look no further than Boosted Stealth.

Hill Climbing: Climb a 25% grade with speed and ease. Ride Modes: 5 ride modes, including the all-new Hyper mode, exclusive to Boosted Stealth. Wheels: Boosted Stratus 85mm wheels deliver the highest roll speed of any Boosted board to date. Deck: Super Flex composite deck offers the perfect mix of flex and feel for an extremely responsive ride. Brakes: Regenerative and reliable. Come to a smooth stop at any speed. Remote: Ergonomic and Bluetooth™ enabled. Control your speed with comfort and ease.

FAQS

► Q: Are your products 100% manufactured by Boosted?

► Q: What if something says out of stock?

▼ Q: Who pays for shipping?

USA answer: We will pay for shipping on anything over \$100. If you need something repaired you will be required to pay for shipping both ways. If your board requires a warranty part we will do our best to ship you a replacement part on us to get you back up and rolling.

Canadian answer: Please see [shipping page](#)

► Q: Where are you located, can I come in for a visit?

► Q: I am a retailer and am desperate for more Boosted products. Can you hook me up?

► Q: I am international, specifically Canada. Can I buy from you?

► Q: I am going to use a freight forwarder. What happens if they can not forward the order because of a battery or other issue?

► Q: How about Alaska or Hawaii?

► Q: What happens to me if I already own a Boosted Board with a warranty?

► Q: Then who are you guys?

► Q: What does that mean for me? Can I still get service for my Board / Rev?

► Q: So if I have a warranty/repair issue with a board/scooter I already own I'm totally screwed?

► Q: If I buy something from you, what sort of warranty do I have?

► Q: I need a replacement part that I don't see on your site.

► Q: Will you be receiving more 105 wheels and/or Beams?

► Q: I have an existing Boosted product with an issue. Can you help me repair it?
